Allowable Subject Matter

The following is a statement of reasons for the indication of allowable subject matter: Claims 1-11 are allowable over the art of record. This is because the art of record does not teach or disclose a recording method, a recording apparatus and a system controller for writing data on a write-once disc as recited in claims 1, 7, 8, 9 and 10, and including, for example,

Claim 1: A recording method for writing data on a write-once disc, the write-once disc having a plurality of physical sectors, the write-once disc including a volume space having a plurality of logical sectors, each of the plurality of logical sectors corresponding to one of the plurality of physical sectors, the recording method comprising the steps of:

(a) receiving a write instruction which specifies at least a logical sector in which data is to be written;

(b) determining whether the logical sector specified by the write instruction corresponds to a recorded physical sector or an unrecorded physical sector;

(c) when it is determined that the logical sector specified by the write instruction corresponds to an unrecorded physical sector,

(c1) writing the data into the unrecorded physical sector,

(c2) determining whether a verification of the data which has been written into a-the previously unrecorded physical sector of (c1) is successful,

(c3) when it is determined that the verification of the data that has been written in (c1) is not successful,

(c31) writing the data into an unrecorded physical sector other than the previously unrecorded physical sector of (c1) in which the verification of the written data is not successful, the unrecorded physical sector being selected from the plurality of physical sectors corresponding to the plurality of logical sectors in the volume space,

(c32) generating a remapping table including remapping information which remaps an original address of the physical sector corresponding to the logical sector specified by the write instruction to a remapping address of the selected previously unrecorded physical sector of (c31), and

(c33) writing the remapping table on the write-once disc; and

(d) when it is determined that the logical sector specified by the write instruction corresponds to a recorded physical sector,

(d1) writing the data into an unrecorded physical sector other than the recorded physical sector corresponding to the logical sector specified by the write instruction, the unrecorded physical sector being selected from the plurality of physical sectors corresponding to the plurality of logical sectors in the volume space,

(d2) determining whether a verification of the data which has been written into the selected previously unrecorded physical sector of (d1) is successful,

(d3) when it is determined that the verification of the data that has been written in (d1) is not successful,

(d31) writing the data into an-another unrecorded physical sector other than the selected previously unrecorded physical sector of (d1) in

which the verification of the written data is not successful, the another unrecorded physical sector being selected from the plurality of physical sectors corresponding to the plurality of logical sectors in the volume space,

(d32) generating a remapping table including remapping information which remaps an original address of the physical sector corresponding to the logical sector specified by the write instruction to a remapping address of the another selected previously unrecorded physical sector of (d31), and

(d33) writing the remapping table on the write-once disc.
